

Project Title: **2025 Winter Course Survey**Courses Audience: **50**Responses Received: **23**Response Ratio: **46.0%**

Report Comments

The UCalgary Course Experience Survey (UCES) provides students with an opportunity to give feedback to course instructors on their learning experience. This information is intended to enhance teaching, provide students with information to assist with course selection, and to provide information to academic leaders responsible for the assessment of teaching.

Student course feedback can be affected by factors that are not related to teaching and learning, such as the identity of the course instructor, class size and the course topic.

UCES is administered each academic term for academic courses subject to provisions as outlined in the 1998 USRI Report. UCES consists of a set of six core institutional questions and five student information questions. These may be accompanied by an additional set of questions developed by and specific to the faculty associated with the course which are reported on separately.

Further information about UCES can be found [here](#), including support for [making sense of your student feedback](#).

Any sharing or reporting of information collected in the UCES will be done in accordance with UCalgary's Privacy Policy.

Project Title

This is the year and term for which the report refers to.

Courses Audience

Final number of students enrolled in a course.

Responses Received

Number of students that submitted a course survey.

Response Ratio

Percentage of students that submitted a course survey.

Creation Date

Date for which the report was generated.

Number Times Taught

Number of times the instructor has taught the course within the last 10 years.

Additional Student Information

Questions asked of students to give additional student information about their course.

Frequency Distribution

Bar graph that displays the frequency of responses for each the rating items (Strongly Agree, Agree, Undecided, Disagree, Strongly Disagree, and Unable to Comment) within a singular question, which includes the number (#) of responses and corresponding percentage (%).

Overall Section

The 'mode' represents the value that is chosen most often within a question. For all 5 rating items, the mode ranges from 5 (Strongly Agree), to 1 (Strongly Disagree). Where a question has a bi-modal or multimodal result, all values are displayed.

Student Comments

List of student comments that answered the question, "Please provide additional information for any of your answers above", in reference to the five core institutional questions.

Cross-Linked Courses

Cross-linked courses, i.e. those that are taught by the same instructor at the same time, are treated separately for the purposes of course feedback surveys. Ratings are based on the responses given by students registered in each course. Exemptions apply to each course separately, so it is possible for one course to be published and not the other.

Combined Classes

Multiple sections or courses taught together are surveyed together within the same course survey, however, divided per course instructor, with separate reports. Individual instructor results are not shared amongst instructors within a course.

Exemptions

Courses with fewer than 8 registered students are generally not surveyed. Tutorial and Laboratory sections are only surveyed if they are the primary section for the course. Results will be published provided a minimum of 8 responses and 20% of the course enrolment response rate is met. Instructors may opt-out from publishing due to extenuating circumstances with the approval of the Dean or their delegate.

Copyright notice

In accordance with its IP Policy, the University owns the intellectual property of the UCES, including all data and reports compiled therefrom. Personal information collected in the UCES is collected under section 33(c) of FOIP and is in the custody and control of the University.

Number Times Taught

Number of times the instructor has taught this course / these combined courses (last 10 years including the current term): **2**

Additional Student Information

For you this course / course component is:

A program requirement	3	13.0%	
Required, but a choice among several	19	82.6%	
An option or elective	1	4.3%	
Total	23	0%	

This course is:

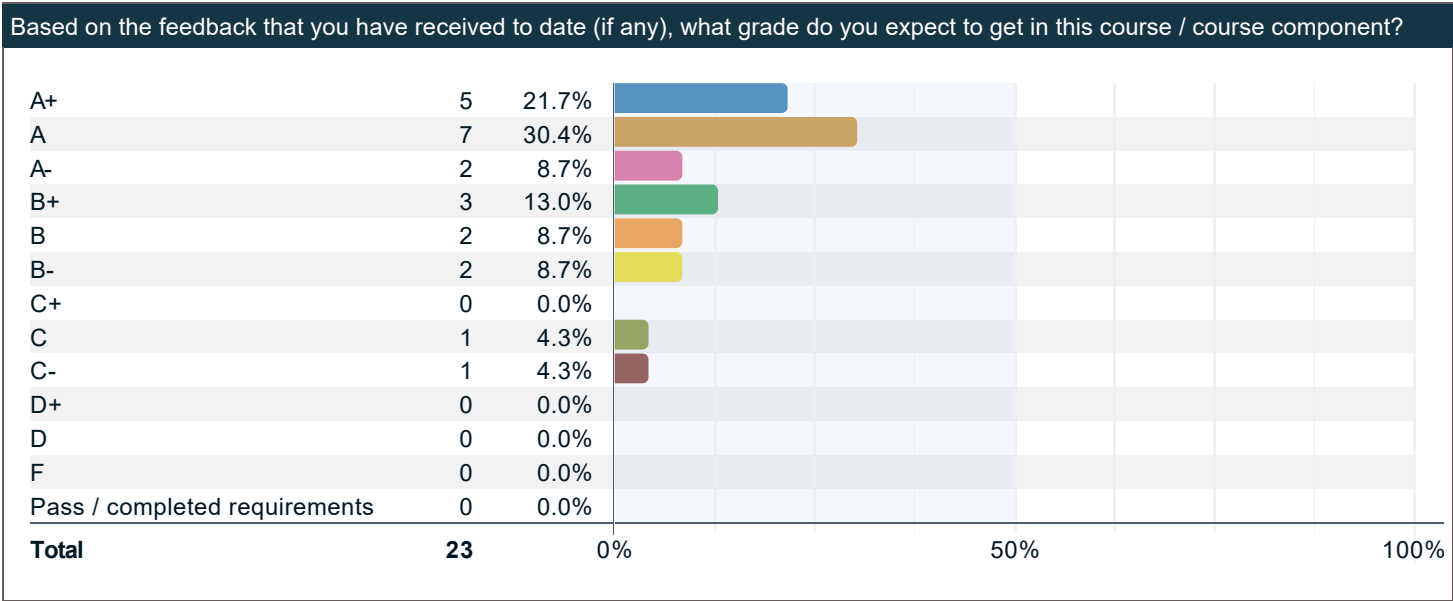

In the department or program of your present or intended major/specialty	23	100.0%	
Not in the department or program of your present or intended major/specialty	0	0.0%	
Neither of the above because your major/specialty is unknown	0	0.0%	
Total	23	0%	

Percent of class sessions you have attended in this course / course component:

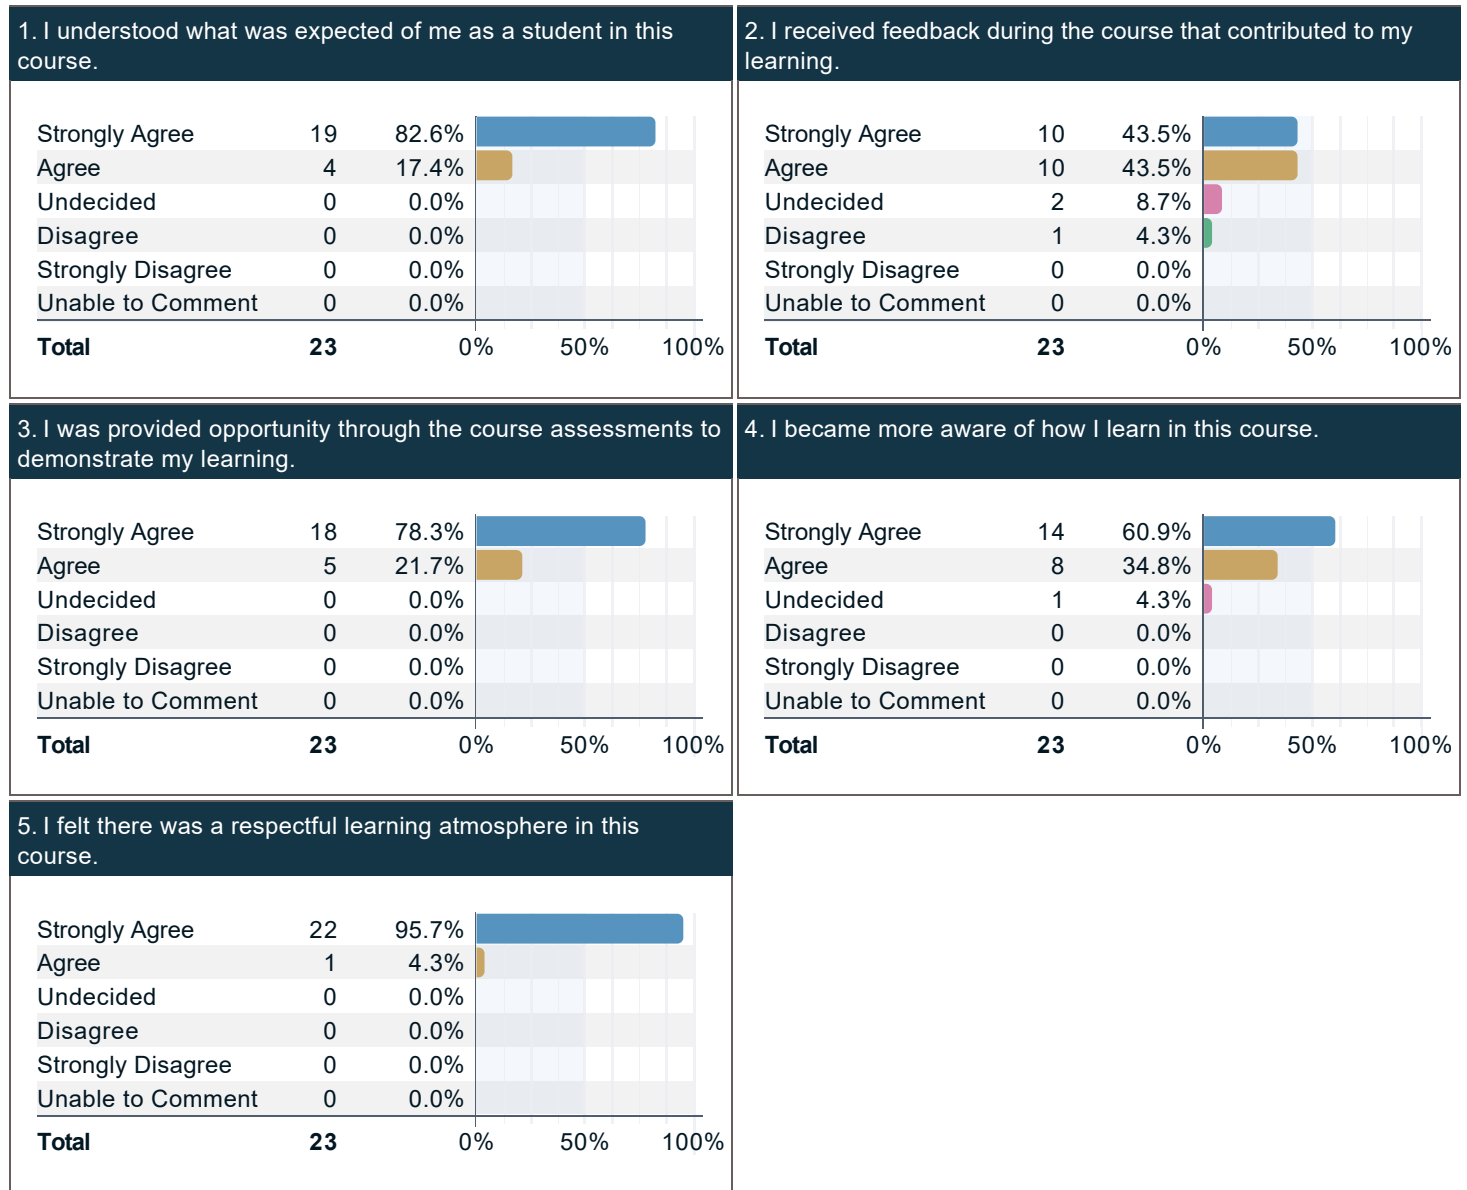

0-20%	0	0.0%	
21-40%	0	0.0%	
41-60%	1	4.3%	
61-80%	2	8.7%	
81-100%	20	87.0%	
Total	23	0%	

Compared to other university courses of this type (e.g., lecture, lab, practicum, distance education), the workload for the course / course component being evaluated is:

Much lower	0	0.0%	
Lower	2	9.1%	
About the same	10	45.5%	
Higher	9	40.9%	
Much higher	1	4.5%	
Total	22	0%	

Frequency Distribution

Overall

	Mode	Strongly Agree (5)	Agree (4)	Undecided (3)	Disagree (2)	Strongly Disagree (1)	Unable to Comment
I understood what was expected of me as a student in this course.	5	19	4	0	0	0	0
I received feedback during the course that contributed to my learning.	4,5	10	10	2	1	0	0
I was provided opportunity through the course assessments to demonstrate my learning.	5	18	5	0	0	0	0
I became more aware of how I learn in this course.	5	14	8	1	0	0	0
I felt there was a respectful learning atmosphere in this course.	5	22	1	0	0	0	0

Student Comments

Responses to "Please provide additional information for any of your answers above."
Adam Upenieks is one of the best—if not the best—professors I've had in my five years of university. His passion for the subject is truly inspiring, and he communicates complex concepts with clarity and ease. Throughout the semester, I found myself genuinely excited to attend every class, knowing there would always be something valuable to take away. He's sparked a real interest in options trading for me, and I now feel confident that the knowledge I've gained in this course will not only benefit my career but also serve me well in life more broadly.
I think Adam is a great professor. He was great at explaining course concepts, was very available to ask questions and made it very clear what we are expected to do for assignments/assessments. I did find that this particular course was very calculation heavy and because of that difficult to keep up with at times. However, this was a very good course and I would happily recommend taking a course with Adam.
Adam is by far the best professor I have had I askayne to date. He spent a gracious amount of time explaining key concepts that were essential to the course. Not only was he incredibly engaging, but it was evident that he put time and effort into his lecture slides, to make it extremely clear what is necessary and required to succeed in this class. He carries a high amount of knowledge of the content he teaches and is happy to chat after class, explain concepts, or even just the finance industry. Having Adam as one of my last professors at askayne will leave a lasting impression.
The teaching style demonstrated by the prof really resonated with me as he would explain a concept and then walk us step-by-step through an example. I also appreciated the time he took to ask if we needed further clarifications.
In my opinion, valuable course, well structured, feedback provided, prof is there to support you when needed. Prof is present and extremely well knowledgeable on the material.
Good learning environment and professor is great
Professor was great at teaching and great at explaining derivatives concepts even for students with little experience. Questions regarding certain concepts were met openly and informatively, and class structure was excellent. Course outcomes became clear, and professor made an effort to incorporate fun during the term.
This was my favorite course I've ever taken. The instructor was great at explaining complex problems and I believe I have learned the most from this single course than in any other.
Excellent teacher
Great teacher that allowed fair assessment
The notes and instruction were exceptional, especially compared to when I learned about derivatives in another finance class. I really liked the intuitive explanations that he offered for a minimum level of understanding to succeed in the course, and also the formal explanations for deeper understanding. Walking through example problems really helped me understand the mechanics of derivatives, and the assignments and tests were amazing practice. Overall, this will remain one of the best educational experiences I've ever had. I was interested in each class. What really worked for me was (if you want to recreate this in the future) was breaking down HOW things worked, which let me go on my own to play with the pieces. Also, connecting the material to real observations worked well because it tapped into experiential learning, letting the material stick better in my mind because I have an experiential association. Thanks for all the work you did!!
This was easily one of the most enjoyable and valuable courses I've taken in my finance degree, and a big part of that is due to the incredible teaching of our professor. He is not only knowledgeable but genuinely cares about whether students understand the material. He took the time to draw out graphs, break down strategies, and walk us through concepts from the ground up, something I truly appreciated since I initially struggled with this area of finance.
I think that what stood out the most was how approachable he was. The class atmosphere was always welcoming, and I actually looked forward to attending every morning. His lectures were interactive and often tied in real-life market examples, including his own trades, which made the learning experience both practical and engaging. He also shared his handwritten notes right after each class, which was incredibly helpful for review and exam prep. I found the assignments were well aligned with the course content and really helped reinforce the material.
Overall, this course exceeded my expectations. I came in with a weak foundation, but I'm leaving with a strong grasp of futures and options, all thanks to Professor Adam!
The class offered an engaging, inclusive environment that made learning about futures and options easy and fun. Adam is a caring professor that always goes the extra mile to answer questions.
Wonderful class, with relevant material and assignments.
This was one of the most engaging and informative courses I've taken in my entire university career
